

## Changes in Crime and Killings of Police After Constitutional Carry Adopted

Information provided by Professor Carl Moody, College of William & Mary and Research Director for the Crime Prevention Research Center, cemood@wm.edu

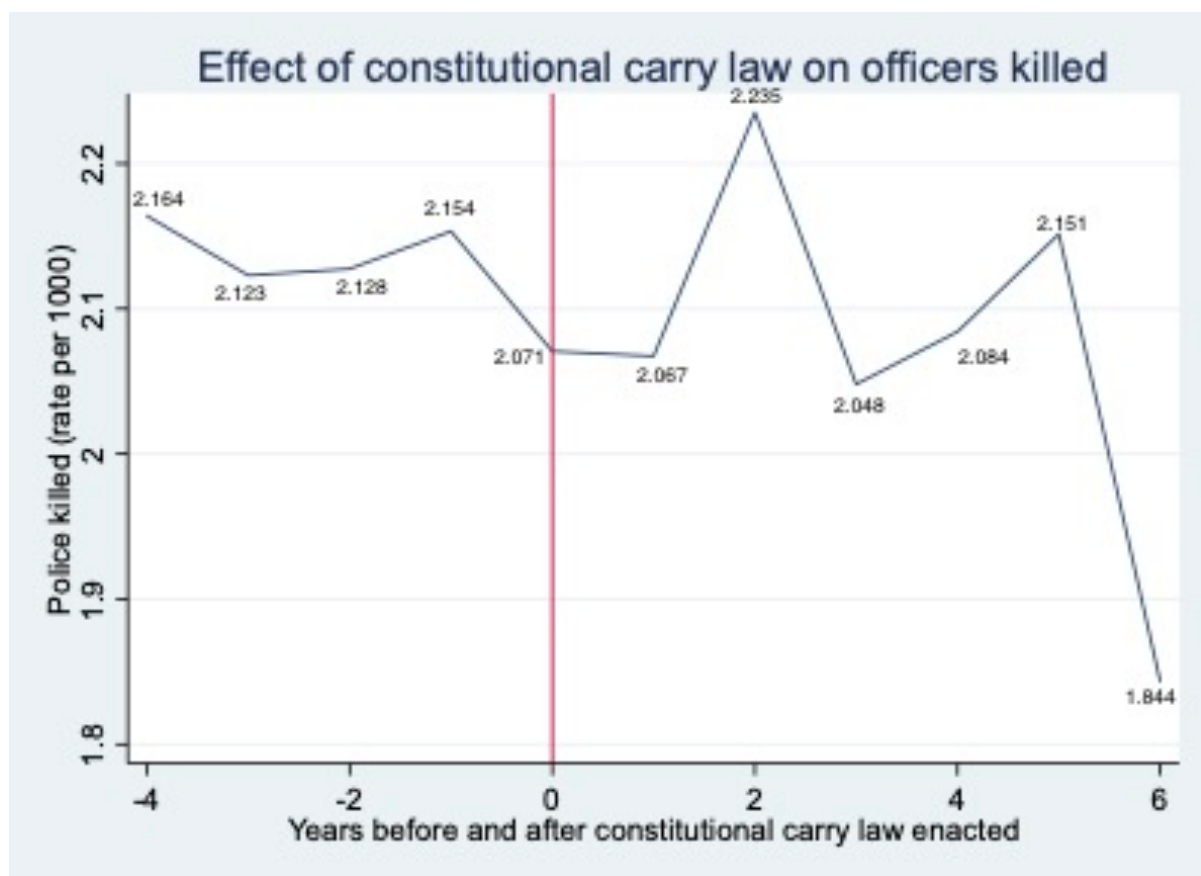

Analyzing the thirteen states that enacted Constitutional Carry that we have murder rate data by 2018 so that we have at least three years of data after the enactment to examine.

AK (2003), AZ (2010), AR (2018), ID (2016), KS (2015), KY (2019), ME (2015), MS (2015), MO (2017), NH (2017), ND (2017), WV (2016), and WY (2011). Vermont also has Constitutional Carry, but they have had it continuously from the time that they became a state so there is no crime data available from that point in time. The drop in murder is statistically significant, but the change in violent crime is not.

	Before	After
Murder	4.49	4.31

Violent Crime	331.5	318.2
---------------	-------	-------

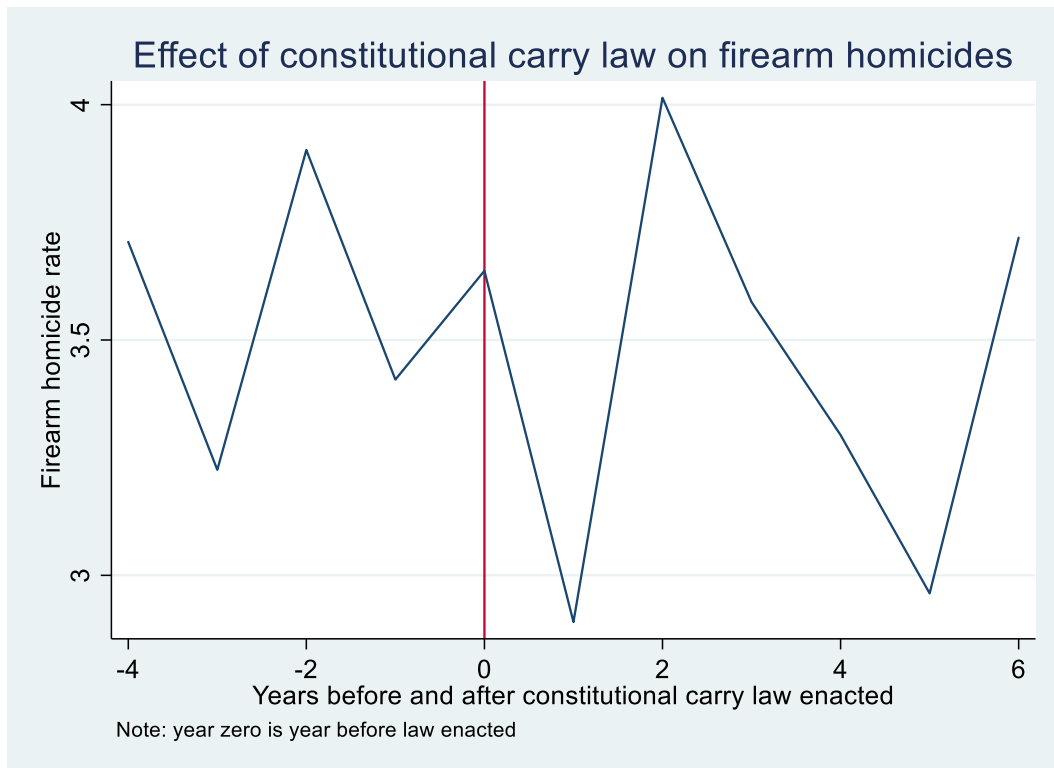

Same states as shown for the murder and violent crime rate numbers — no statistically significant change.

Mean before 2.13/1,000 police officers

Mean after 2.07/1,000 police officers

## Firearm homicide

Same states as shown for the murder and violent crime rate numbers — no statistically significant change.

Mean before: 3.56

Mean after: 3.45
